

# Jett Nguyen

Computer science graduate with a public relations minor. I co-founded Otian AI and lead engineering on Archie, a desktop app that runs a personal AI agent on the user's own machine. I work across the stack and start from the person using it: what they expect, what they will actually do, and what they should never have to think about.

## Experience

three roles

### Co-Founder, Engineering & Implementation

Apr 2026 - Present

#### Otian AI

- Co-founded the company after setting up AI agents by hand for clients, then turned that service into a product.
- Lead engineering on Archie, a Rust, Tauri, and React desktop app for macOS and Windows that runs a personal agent locally and answers from Telegram, Discord, Slack, Matrix, and iMessage.
- Built the commercial layer around it: Stripe billing, Firebase auth with 2FA, a signed auto-updater, and a marketplace of add-ons included with the app.
- Own the client lifecycle from discovery call through configuration and fine-tuning, and write the public trust documentation that maps every privacy claim to shipped code.

### Software Engineer Intern

Jun 2025 - Dec 2025

#### MARA

- Built a full-stack hashrate arbitrage tracker that pulled four to six live exchange APIs into one dashboard, supporting purchasing decisions across a ~60 EH/s mining fleet.
- Replaced manual cross-referencing between fragmented markets with a single view of availability, pricing trends, and transaction history for about 25 people in finance, operations, and strategy.
- Shaped the tool's scope by working with non-technical stakeholders and turning operational requirements into data they could read at a glance.

### Assistant Accountant

Aug 2021 - May 2022

#### Weichert Realtors Equity

- Built and maintained expense and income tracking across more than ten properties for a private real estate client.
- Served as the main internal contact on that account, handling correspondence, documentation, and coordination.
- Kept bookkeeping records and standardized file organization for daily operations.

## Selected projects

all sixteen

### Archie

2026 to now

Independent, team · Rust, Tauri 2, React, TypeScript, Tailwind CSS

- Desktop app that runs a personal AI agent on your own machine, reachable from Telegram, Discord, Slack, Matrix, or iMessage on a Mac. Built at Otian AI on Tauri + Rust + React.
- Lead engineer. Rust and Tauri desktop app, and I own the client work end to end.

## Education

B.S. Computer Science, Minor in Public Relations

University of Florida

Aug 2022 - May 2026

- 3.65 GPA across a dual focus in computer science and public relations.
- Senior project: Sideline, a mobile-first video app for youth soccer families.

## Skills

### Languages

TypeScript, JavaScript, Python, Rust, C++, C#

### Frontend

React, React Native, Vite, Tailwind CSS, HTML / CSS

### Backend & Data

Node.js, Express, MongoDB, Prisma, Firebase, Supabase

### Desktop & Systems

Tauri, Electron, .NET, Unity, Audio DSP

### Cloud & Tooling

AWS S3, AWS Lambda, Docker, Stripe, GitHub Actions

### AI

Agentic AI, LLM Integration, Prompt Engineering

### Beyond Code

Human-Computer Interaction, Public Relations, Music Production, Video Production

## Activities

## Tempify App Store 2026 to now

Independent, solo · React, Vite, Tailwind CSS, Supabase, Stripe

- Daily music game suite inspired by LinkedIn and NYT-style habits, combining multiple music trivia formats into one consistent daily experience.
- Solo build, live on the App Store and the web, with a paid archive on Stripe.

## Sideline 2026

Coursework, team · React, Node.js, Express.js, MongoDB, JWT

- User-centered web app for youth soccer families to upload, organize, share, and collaboratively tag game clips.
- Senior project. Frontend lead on a team of four, designed around one-handed phone use.

## NightLink App Store 2025 to now

Independent, solo · React 18, Vite, Firebase Auth, Firestore, Node.js

- Dream journal and social network with AI-generated dream titles/summaries, privacy controls, and social interactions on React + Firebase.
- Solo build, live on the App Store, with per-dream privacy controls on Firebase.

## Stackd 2026

Coursework, team · React, TypeScript, Node.js, Express, MongoDB

- Mobile-first flashcard app with custom decks, no screen clutter, and UF-specific features.
- Lead contributor. Import a deck from Quizlet or generate one with Gemini.

## Splitsy 2025

Coursework, team · React Native, Expo, Node.js, MongoDB, JWT

- React Native expense-splitting app with OCR receipt scanning and group management. User testing showed ~33s task time reduction vs manual splitting.
- Measured against splitting the same bill by hand: ten students, both ways, in randomized order.

## University of Florida Football

Gainesville, FL

### Green Team

Aug 2025

Organization and sustainability

## Boca Ciega Senior High School

Gulfport, FL

### Teaching Assistant

Aug 2021 - May 2022

Mentorship and communication

### Shadower

Sep - Nov 2018

Leadership and responsibility

## Juvenile Arbitration and Teen Court

Pinellas

St. Petersburg, FL

### Volunteer Juror

Sep - Nov 2018

Critical thinking and collaborative decisions

## Certifications

— Microsoft Office Specialist: Word, PowerPoint, Excel

— Autodesk Certified User

— Fundamentals of Media Relations

— Hootsuite Platform Certification
